

Presenting your pictures  
electronically

# Common Methods

- Windows Slideshow
- PDF Slideshow
- Photoshop Elements Slideshow
- Slideshow software supplied with your camera
- WOW Slider (HTML based for browser)
- Microsoft Powerpoint
- Digiframe

# Steps to take

- Mental storyboarding
  - Tell the story by pictures
  - Assume your viewer probably won't know the venue
  - Keep it in mind all through your visit
- It might only be one picture but it has to tell the story

- **Unknown situation**
- **Get into their world**
- **Use bounced flash**
- **Wait for the moment**

# Sort the slides into groups

- Rename files
- Most viewers use alphanumeric priorities

a1.JPG

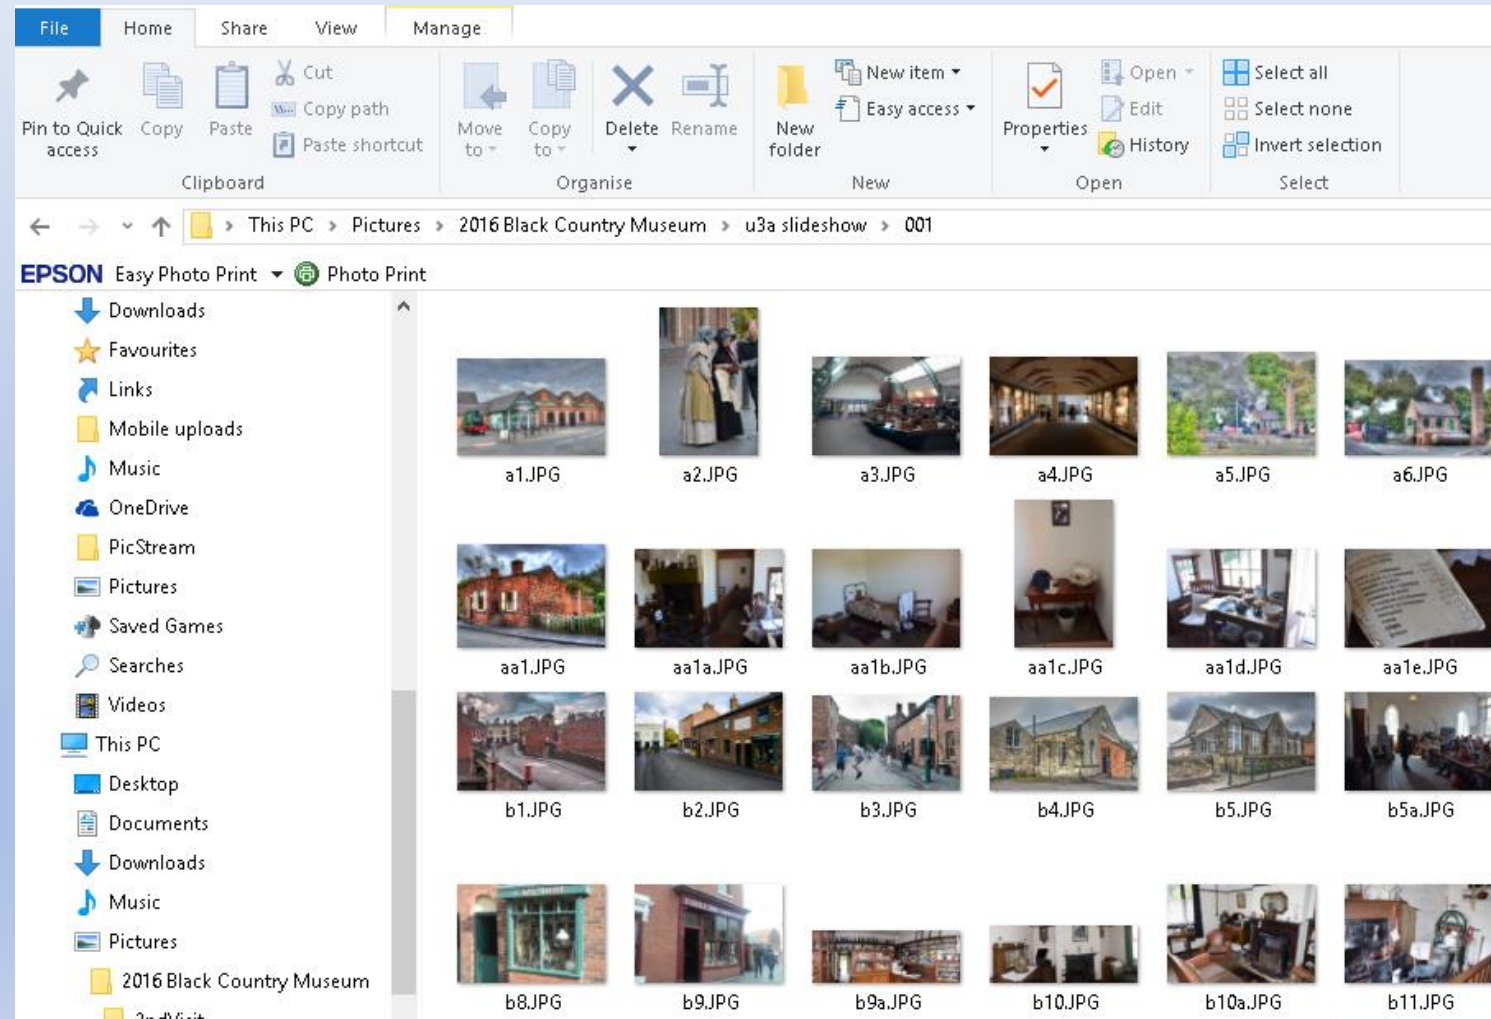

a2.JPG

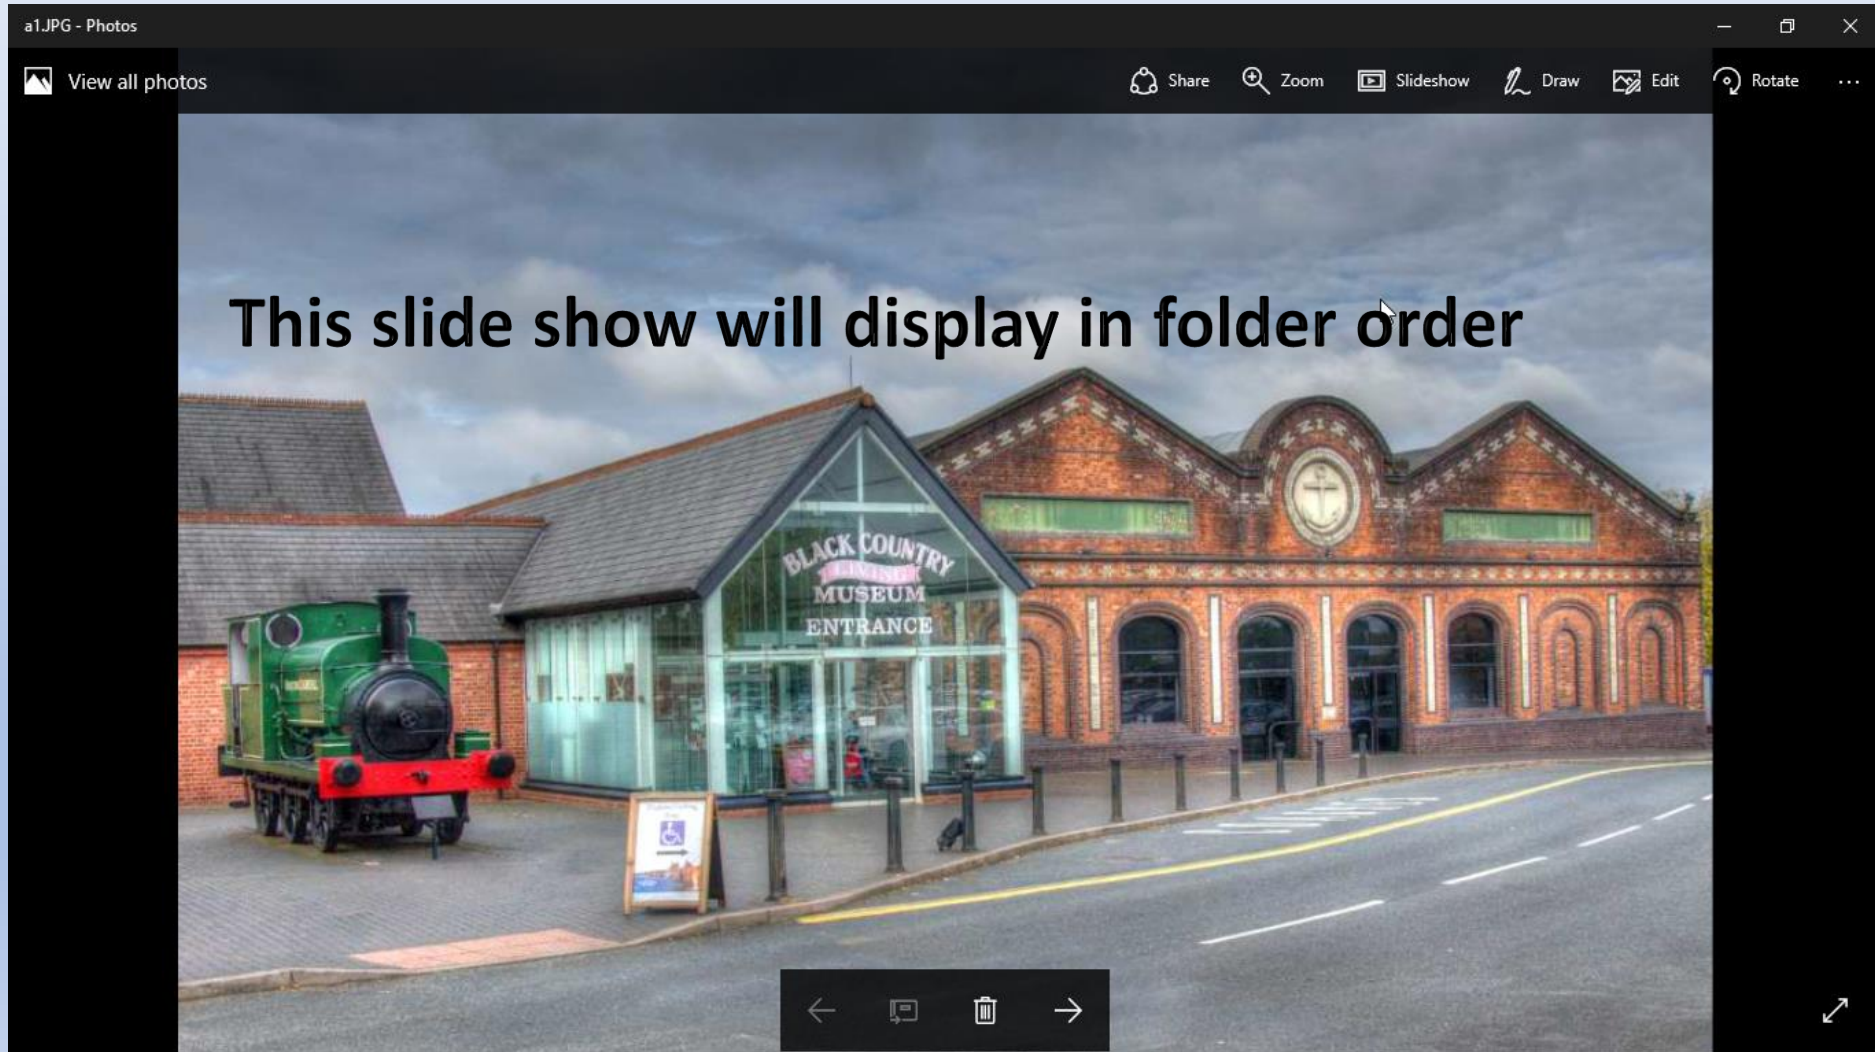

a3.JPG

- EG  
a1.jpg a2.jpg ...a11.jpg etc.
- To insert into a sequence a1a.jpg will display after a1.jpg and before a2.jpg

# Double click on file in Windows Explorer to view slide in viewer

# Simple Slideshow in Windows

# Digital Picture Frame

- Recognises most popular formats
- Resizes image to frame size
- Allows different transitions
- Allows transition times
- Allows variable display times
- Just keeps going
- Wall mounted or stand alone
- Uses SD cards or USB flash drive
- Powered by mains power pack
- Various sizes
- *Sure beats handing photos round!*

# Using PowerPoint

- Insert pictures straight into a slide
- Use text to annotate
- Use individual slide transitions
- Use individual animations
- All elements can be timed
- Slideshows can run automatically or be manually controlled
- Slideshows can be run on a continuous loop

# Keep it simple and consistent

- Use consistent transitions e.g. fade in
  - Avoid spinning transitions
  - Use constant transition speeds of between ½ sec and 2 secs
  - Other effects can be used occasionally, this will enhance their impact
  - Use constant slide display times where practical
    - 5 secs is good for a simple picture
    - If there is text to read make sure enough time is allowed

Takes audience by surprise  
Use fade-in to add text  
OK if that's what you want

# Advanced Transitions

## Morphing

Click to change slide  
Picture morphs to larger picture  
in next slide
